

Management Options:

Chemical Treatment

Glyphosate at 6 l/ ha using a spray or weedwiper or stem injection.

Suitability: Easiest treatment during dry seasons where access to wet margins and muddy areas becomes firmer.

Equipment: Knapsack sprayer. Personal Protective Equipment deemed necessary after risk assessment.

Efficiency: Good

Constraints: Requires Non Aerial Application Approval from the Scottish Environment Protection Agency and NPTC PA1 & PA6AW qualifications.

Potential non-target damage with knapsack spraying.

When: During June, July, August, September and October
