Management Options:

**Chemical Treatment**
Glyphosate at 6 l/ha using a spray or weedwiper or stem injection.

**Suitability:** Easiest treatment during dry seasons where access to wet margins and muddy areas becomes firmer.

**Equipment:** Knapsack sprayer. Personal Protective Equipment deemed necessary after risk assessment.

**Efficiency:** Good

**Constraints:** Requires Non Aerial Application Approval from the Scottish Environment Protection Agency and NPTC PA1 & PA6AW qualifications.

Potential non-target damage with knapsack spraying.

**When:** During June, July, August, September and October
