## Port biosecurity facilities for the UK Overseas Territories

## **Technical specifications**

The main facilities and equipment required for a port-of-entry (sea or air) biosecurity facility in the UK Overseas Territories are given below, together with estimates of cost.

Only specialised equipment is costed and estimates are not provided for items such as constructing buildings, converting existing buildings, laying down hard-standing, etc., fittings such as lights and sockets, and equipment such as torches and knives, as these are variable across the Overseas Territories.

Quotes provided are indicative and should not be taken as an endorsement of the company or brand; others are available. Costs are given in GBP (£ sterling) and are correct as at June / July 2020.

room (air or sea ro	ize depends on the amount of goods	
wi do 0.: go	ize depends on the amount of goods outinely requiring inspection.  or example: an inspection room 7.5m x 6m will allow up to 6 inspectors working at 3 ouble inspection benches, each ca 1.5m x .5m, with benching at the sides to hold oods waiting to be inspected or just leared.	Cost depend on size and structure.  Options include complete buildings, kit sheds and buildings, and shipping container conversions.  A 20ft shipping container basic office model, with one
Fa	<ul> <li>acility to include:</li> <li>1000 lux light above each double inspection bench</li> <li>Closed room</li> <li>Air conditioning</li> <li>No windows, or windows fitted with insect mesh</li> <li>Internal doors solid, with small glass window</li> <li>Sluice</li> <li>Hand basin</li> <li>Disposal bins with swing lids for biosecurity waste</li> <li>Sealed floor, uniform pale in colour with no pattern, easy cleaning with</li> </ul>	window and door, costs around £9,000¹.  Fitting are extra, costs depend on specification.  Brushed steel inspection benches from £700²  UV light traps from £50³

	Freezer of at least 300l capacity (may go in storage or holding area)  Laboratory, with:  Breeding cages for invertebrates Benching and microscopes Incubators High temperature oven for sterilising materials The main reference collection may be held here	Incubator from £700 <sup>9</sup> 10-drawer entomological cabinet from £1,600 <sup>10</sup> Breeding cages can be made locally. Bought from £15 (30cm cube pop-up cage) <sup>11</sup>
Vehicle and machinery inspection facility	<ul> <li>Area of hard-standing at least 4m x 6m size (sufficient for a single vehicle or machinery of standard to large size).</li> <li>Sunken central drain fitted with a filter to collect debris and seeds; draining directly to the sea is ideal.</li> <li>Hard-standing to be surrounded by weed-free barrier at least 5m in width.</li> <li>Access to water and power for cleaning</li> <li>Pressure cleaning equipment</li> <li>Vacuum cleaning equipment</li> <li>Location to be easily and safely accessible for vehicles, which then proceed out of the bonded area once cleared / cleaned</li> </ul>	Costs depend on size and location.  Local quotes should be sought on laying hardstanding and connecting power and water, if necessary.  Pressure washer costs depend on power supply, cold or hot wash, and size required (amount of use anticipated). From £600 <sup>12</sup> Vacuum cleaning equipment depends on size and anticipated level of use. From £500 <sup>13</sup>
Shipping container inspection facility	<ul> <li>Concrete stands at a height to allow an inspector to comfortably stand below the parked container, allowing safe inspection of the underside of a container.</li> <li>Scaffold gantry to the side, allowing safe inspection of the top surface of a shipping containers</li> <li>Location to be easily and safely accessible for containers, which then proceed out of the bonded area or into stacks once cleared / cleaned</li> </ul>	Costs depend on size and specification.  Local quotes should be sought on laying hardstanding and building a gantry.
Detector dog facility	Kennels, equipped with necessary feeding, cleaning and handling equipment	Cost depends on requirements: size, number, location (indoors or

	Holding area at air and sea ports (lockable, suitable temperature, away from public, bowls, water)  Harness and long lead for work	outdoors, with or without run). Advice from a local veterinarian should be sought for the appropriate equipment for the location.  Modular kennels and pens can be bought. Example: modular mesh pen, 3m x 2m x 1.84m tall, from £700 <sup>14</sup> Crates, for vehicles and as holding pens, from £700 <sup>15</sup>
Detector dogs	Professionally trained detector dog, to detect up to three scents.  The bio-security dog can detect numerous scents. Once a dog is trained on 1 or 2 scents in a group it will then reliably pick up on other associated scents. Dogs can be trained to detect meat, seeds, live plants, fruit and products of animal origin. If a dog is trained to detect these scents, by association this can extend the list of detectable items in to the hundreds. The list of scents required would depend on where the dog team was to be deployed and the requirements of the customer.  Professional detector dog handler training.  Note that quoted costs do not include transport of dogs to the territory, or travel and accommodation for the dog handler training in the UK.	Trained dogs from £8,000; 8-week dog handler course £8,000 plus VAT <sup>16</sup>
Equipment for biosecurity inspections	<ul> <li>Random search selector</li> <li>Binocular microscope and / or digital microscope</li> <li>Ziplock bags</li> <li>Specimen containers and 70% alcohol</li> <li>Bin bags</li> <li>Forceps, brushes etc</li> <li>Hand lens</li> <li>Light / lens fittings for inspection bench</li> </ul>	Mains powered random search selectors from £250, battery powered from £80 <sup>17</sup> Binocular microscope from £400 <sup>18</sup> Digital microscope from £50 <sup>19</sup>
